NEW ReVue & P-ReVue – Modular Equipment Table

Based on everything that we have learned from developing our award winning ReVo equipment table, ReVue, and P-ReVue offer high performance modular solutions to equipment siting and isolation.

Whether you need a single equipment platform, or a 7-tier stand, the ReVue & P-ReVue provides the isolation of previous generations of ReVo table, with ultimate flexibility & high-end styling.

ReVue is a solution based on acrylic columns & shelves, while P-ReVue offers PEEK* columns. **The P-ReVue comprehensively outperforms all our previous equipment tables.**

Two shelf size options, two shelf thickness options, 4 spacing options, available with acrylic or PEEK columns.

Simply purchase what you need now, with the ability to extend or split the stand as the need arises. To build a table, choose whether you are wanting a ReVue or P-ReVue & start with the base shelf & (termination kit) and shelf style (choose size, colour and thickness), next pick the spacing you require and your next shelf and so on....

Shelf Thickness	10mm		15mm
	Clear	Black / white	Clear
Standard shelf width 57cm max (44cm internal), depth 42.5cm max	£100	£115	£165
Large shelf width 62.5cm max (49.5cm internal), depth 47cm max	£150	£170	£235
	Acrylic (25mm dia Clear)		PEEK (20mm dia Black)
Table termination kit (Top / base fixings & spike kit)	£85		£250
Spacers (10cm, 15cm, 20cm)	£85		£200 / £250 / £300
Spacers (32cm)	£10		£400

* PEEK is a high grade engineering thermoplastic with highly advantageous mechanical and acoustic properties for this application. PEEK is protected by international patent.

Other Isolation Products

The P-Cone Isolation system

These PEEK isolation cones are a flexible approach to equipment isolation. They may be configured as equipment supports, or highly effective loudspeaker feet.

P-Cone 2 – PEEK Equipment Isolators £25 each

The P-Cone is a 20mm diameter x 25mm high cone made from machined PEEK. Use 3 or 4 cones to effectively isolate equipment from mechanical vibrations.

P-Cone L – PEEK Equipment Isolators £75 each

The P-Cone is a 50mm diameter x 25mm high cone made from machined PEEK. Use 3 or 4 cones to effectively isolate equipment from mechanical vibrations.

ReResponse Mini – Acrylic Isolator £40

A great 'bang for the buck' isolator. An adjustable support that will bring sparkle to the performance of almost any system. Effectively isolating the kit from the vibration of wooden and glass tables. Recommended for use with the ReFlex distribution block to isolate it from floor borne vibrations.

Dimensions: Brackets (front and rear) 38cm wide x 3.5cm high. Nominal 25cm central spar (10mm) allows the brackets to be flexibly spaced for optimum equipment support.

RePlica 'Lite' – Acrylic Speaker Stand £350 per pair

The RePlica 'Lite' is a high performance cost-effective stand. It is made from shaped 10mm laser cut acrylic. Each 'RePlica Lite' is a 2 part interlocking stand raising the speaker to a nominal 50cm or 60cm (optional) in height. This stand is ideal for mid sized bookshelf speakers up to 10 Kg.

RePlica – Large Acrylic Loudspeaker Stand £850 per pair

The RePlica Large is the top of the range of loudspeaker stands, within the MusicWorks range. Being much more substantial than the 'Lite' version, it's ideal for larger high performance stand-mount loudspeakers. The original design of the stand was based on the 'ReVo' table and takes the performance of acrylic speaker stands to a new level. The stand comprises 3 interlocking pieces made of 15mm thick laser cut acrylic. Stand height is 60cm.

The Dog's Blocks

ReFlex Ultra Gen 3 Power Distribution Block £999

- **New cryogenically treated power sockets with non-metallic fixings**
- **New PEEK fixing & isolation spikes**
- **Ultra high integrity star earth arrangement**
- **Cryogenically treated internal wiring & connectors**
- **Internal power ring**

The ultimate expression of what we know about power distribution. The top of the range ReFlex Ultra G3 builds on research into improved power sockets, and the use of PEEK as vibration isolation. Additional improvements included within this block encompass updated internal connections & conductors, specially selected power sockets complete with de-coupling spacers, optimised star earth path & the use of non-metal fixings throughout. PEEK components have been incorporated to provide both structural integrity and vibration isolation

Power Distribution Products

ReEntry 2 IEC Power Cable

£170

The ReEntry provides an affordable introduction to MusicWorks power distribution capabilities. A large dollop of the clarity and coherence of our top products is provided by this carefully tuned, dual screened cable. IEC power cord. Nominal length 1.8 M.

ReVive 'Lite' 2 IEC Power Cable

£400

A highly tuned compound power cable. The screened dual-compound cabling on this mid-range lead is a simplified version of the full ReVive lead. This cable is supplied with the Furutech Rhodium plated 13A plug, and carefully selected IEC socket. Nominal length 1.8 M.

ReVive IEC Power Cable

£750

A highly tuned compound power cable with cryogenic treatment. The top of the range ReVive power cable features a custom designed cable, with specific attention given to providing a low impedance earth path. It comes fitted with the top of the range Furutech F150 Rhodium plated IEC plug and the latest UK-specified version of the Furutech Rhodium plated mains plug. Nominal length 1.8m.

ReFlex 'Lite' IEC Power Distribution Block

£485

Our best selling power distribution block. The 'ReFlex Lite' provides a cost-effective approach to accessing the coherence that a MusicWorks mains block brings to a system. This 6-way block features acrylic sandwich construction, star earth cabling and carefully chosen (by audition) power sockets. Power inlet is via an IEC socket, allowing the consumer the choice of power cables supplying the block.
